

Information advice and help for (IBS) Irritable Bowel Syndrome

Here are some tips you should know that could help you manage your IBS.

1. 2 Litres of water each day at least, drink herbal teas slowly throughout the day. Example: peppermint, green tea, pukka liquorice and peppermint.
2. Do not drink for 30 minutes before a meal and 60 minutes after as this can make you feel bloated and full of wind; during your meal drink very little.
3. Eat slowly chewing your food well and try not to talk during eating. Stop eating 2-3 hours before going to bed.
4. It is better to eat little and often as this is easier to digest and kinder to your digestive system.
5. **Important:** Depending on your IBS symptoms, if loose take Psyllium husks sprinkled on food or in Capsule form throughout the day to help bulk stool.

For IBS constipation symptoms use organic golden linseeds/flaxseed – 1-2 desert spoons daily on a muesli/granola breakfast. You can soak overnight in fruit juice or simply add to cereal or yoghurt.

6. Charcoal tablets can be taken to help with wind and bloating.
Please Note: If taking the contraceptive pill, please allow 4 hours after taking this before taking the Charcoal, recommend 4 after each meal and swallow don't chew.
7. Detox organic either wild blue and green algae capsules or organic chlorella with spirulina tablets/capsules.
Please Note: Not to be taken if you have a thyroid condition.
8. Exercise regularly as this is an excellent way to stimulate your bowel.
9. Have a soak in a warm bath for 15 – 20 minutes adding two cupfuls of Epsom salts.
10. Dry skin brushing 5-10 mins starting on the right hand side of your abdomen when lying down moving upwards across and down your left side is also very beneficial for increasing circulation in this area.
11. It is important to have the correct position when sitting on the toilet using a foot stool (known as a Squatty Potty, Google it!) sitting back and allowing your bowel to empty properly, after a few weeks your bowel will become accustomed to this. Avoid pushing.

Information advice and help for (IBS) Irritable Bowel Syndrome

Some factors that can cause IBS are:

Stress, Medications, Food intolerances e.g. Gluten, Wheat, Lactose and Corn.

Food's you should eat as part of a balanced diet to help with IBS.
